

## Intake System Installation Notes

- Air Intake Box is assembled but not ready for final installation. Prior to final installation remove top plate and apply a liberal amount of grease to air filter rubber seals and sealing surfaces.
- When installing hose couplers and clamps take care when clocking hose clamps to ensure proper range of motion of the throttle bodies.
- Use supplied bolt when mounting air intake temp sensor into intake top plate.
- A new support brace for the airbox is supplied along with the required hardware. Discard the factory unit.
  
- A custom ECU calibration is highly recommended to maximize the performance of this air intake system. Beyond Redline Performance has done extensive dyno testing and can provide the best solution for your needs.
  
- Replacement air filter elements, pre-filters, and filter cleaning kits are available. Visit [WWW.BeyondRedlineStore.com](http://WWW.BeyondRedlineStore.com) for this and more products for your Yamaha YXZ.

Thank you for your purchase, please contact us directly with any questions.
